

Challenge-4

Sherica Chua

2023-09-06

Questions

Load the “CommQuest2023.csv” dataset using the `read_csv()` command and assign it to a variable named “comm_data.”

```
# Enter code here
library(tidyverse)
```

```
## — Attaching core tidyverse packages — tidyverse 2.0.0 —
## ✓ dplyr      1.1.2      ✓ readr      2.1.4
## ✓ forcats    1.0.0      ✓ stringr   1.5.0
## ✓ ggplot2    3.4.3      ✓ tibble    3.2.1
## ✓ lubridate  1.9.2      ✓ tidyr     1.3.0
## ✓ purrr      1.0.2
## — Conflicts — tidyverse_conflicts() —
## ✗ dplyr::filter() masks stats::filter()
## ✗ dplyr::lag()     masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflicts to become errors
```

```
comm_data<-read_csv("CommQuest2023_Larger.csv")
```

```
## Rows: 1000 Columns: 5
## — Column specification —
## Delimiter: ","
## chr  (3): channel, sender, message
## dbl  (1): sentiment
## date (1): date
##
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

Question-1: Communication Chronicles

Using the select command, create a new dataframe containing only the “date,” “channel,” and “message” columns from the “comm_data” dataset.

Solution:

```
# Enter code here
new<-
comm_data%>%
  select(date,channel,message)
new
```

```
## # A tibble: 1,000 × 3
##   date      channel message
##   <date>    <chr>   <chr>
## 1 2023-08-11 Twitter Fun weekend!
## 2 2023-08-11 Email  Hello everyone!
## 3 2023-08-11 Slack  Hello everyone!
## 4 2023-08-18 Email  Fun weekend!
## 5 2023-08-14 Slack  Need assistance
## 6 2023-08-04 Email  Need assistance
## 7 2023-08-10 Twitter Hello everyone!
## 8 2023-08-04 Slack  Hello everyone!
## 9 2023-08-20 Email  Team meeting
## 10 2023-08-09 Slack  Hello everyone!
## # i 990 more rows
```

Question-2: Channel Selection

Use the filter command to create a new dataframe that includes messages sent through the “Twitter” channel on August 2nd.

Solution:

```
# Enter code here
new<-
comm_data%>%
  filter(
    message>=1,
    channel=="Twitter",
    date=="2023-08-02"
  )%>%
  select(date,channel,message)
new
```

```
## # A tibble: 15 × 3
##   date      channel message
##   <date>    <chr>   <chr>
## 1 2023-08-02 Twitter Team meeting
## 2 2023-08-02 Twitter Exciting news!
## 3 2023-08-02 Twitter Exciting news!
## 4 2023-08-02 Twitter Exciting news!
## 5 2023-08-02 Twitter Exciting news!
## 6 2023-08-02 Twitter Team meeting
## 7 2023-08-02 Twitter Great work!
## 8 2023-08-02 Twitter Hello everyone!
## 9 2023-08-02 Twitter Hello everyone!
## 10 2023-08-02 Twitter Need assistance
## 11 2023-08-02 Twitter Need assistance
## 12 2023-08-02 Twitter Need assistance
## 13 2023-08-02 Twitter Exciting news!
## 14 2023-08-02 Twitter Need assistance
## 15 2023-08-02 Twitter Need assistance
```

Question-3: Chronological Order

Utilizing the arrange command, arrange the “comm_data” dataframe in ascending order based on the “date” column.

Solution:

```
# Enter code here
comm_data%>%
  arrange(date)
```

```
## # A tibble: 1,000 × 5
##   date      channel sender      message      sentiment
##   <date>    <chr>   <chr>      <chr>      <dbl>
## 1 2023-08-01 Twitter alice@example Need assistance  0.677
## 2 2023-08-01 Twitter @bob_tweets  Need assistance  0.148
## 3 2023-08-01 Twitter @frank_chat  Need assistance  0.599
## 4 2023-08-01 Twitter @frank_chat  Exciting news! -0.823
## 5 2023-08-01 Slack  @frank_chat  Team meeting   -0.202
## 6 2023-08-01 Slack  @bob_tweets  Exciting news!  0.146
## 7 2023-08-01 Slack  @erin_tweets Great work!    0.244
## 8 2023-08-01 Twitter @frank_chat  Team meeting   -0.526
## 9 2023-08-01 Twitter @frank_chat  Exciting news! -0.399
## 10 2023-08-01 Slack  @frank_chat  Need assistance  0.602
## # i 990 more rows
```

Question-4: Distinct Discovery

Apply the distinct command to find the unique senders in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data%>% distinct(sender)
```

```
## # A tibble: 6 × 1
##   sender
##   <chr>
## 1 dave@example
## 2 @bob_tweets
## 3 @frank_chat
## 4 @erin_tweets
## 5 alice@example
## 6 carol_slack
```

Question-5: Sender Stats

Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(sender)%>%
  summarise(count=n())
```

```
## # A tibble: 6 × 2
##   sender      count
##   <chr>      <int>
## 1 @bob_tweets    179
## 2 @erin_tweets   171
## 3 @frank_chat   174
## 4 alice@example  180
## 5 carol_slack   141
## 6 dave@example  155
```

Question-6: Channel Chatter Insights

Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(channel)%>%
  summarise(count=n())
```

```
## # A tibble: 3 × 2
##   channel count
##   <chr>   <int>
## 1 Email     331
## 2 Slack     320
## 3 Twitter   349
```

Question-7: Positive Pioneers

Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

Solution:

```
# Enter code here
comm_data%>%
  arrange(desc(sentiment))%>%
  filter(sender!=0)%>%
  select(sender,sentiment)%>%
  slice(1:3)
```

```
## # A tibble: 3 × 2
##   sender      sentiment
##   <chr>         <dbl>
## 1 carol_slack    0.991
## 2 dave@example  0.987
## 3 dave@example  0.985
```

Question-8: Message Mood Over Time

With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(date)%>%
  summarise(mean_sentiment = mean(sentiment))%>%
  arrange(mean_sentiment)
```

```
## # A tibble: 20 × 2
##   date      mean_sentiment
##   <date>      <dbl>
## 1 2023-08-18    -0.0760
## 2 2023-08-14    -0.0692
## 3 2023-08-01    -0.0616
## 4 2023-08-13    -0.0604
## 5 2023-08-04    -0.0510
## 6 2023-08-11    -0.0340
## 7 2023-08-10    -0.0254
## 8 2023-08-16    -0.0220
## 9 2023-08-17    -0.0191
## 10 2023-08-06    -0.0144
## 11 2023-08-07     0.0364
## 12 2023-08-19     0.0551
## 13 2023-08-20     0.0608
## 14 2023-08-15     0.0617
## 15 2023-08-08     0.0666
## 16 2023-08-12     0.0668
## 17 2023-08-09     0.0997
## 18 2023-08-03     0.107
## 19 2023-08-02     0.136
## 20 2023-08-05     0.193
```

Question-9: Selective Sentiments

Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

Solution:

```
# Enter code here
new<-
comm_data%>%
  filter(
    sentiment<0
  )%>%
  select(message,sentiment)
new
```

```
## # A tibble: 487 × 2
##   message      sentiment
##   <chr>      <dbl>
## 1 Hello everyone! -0.143
## 2 Need assistance -0.108
## 3 Hello everyone! -0.741
## 4 Hello everyone! -0.188
## 5 Hello everyone! -0.933
## 6 Need assistance -0.879
## 7 Great work!     -0.752
## 8 Team meeting    -0.787
## 9 Fun weekend!     -0.539
## 10 Exciting news! -0.142
## # i 477 more rows
```

Question-10: Enhancing Engagement

Apply the mutate command to add a new column to the “comm_data” dataframe, representing a sentiment label: “Positive,” “Neutral,” or “Negative,” based on the sentiment score.

Solution:

```
# Enter code here
comm_data%>%
  mutate(sentiment_lable=case_when(
    sentiment>0 ~ "Positive",
    sentiment<0 ~ "Negative",
    TRUE ~ "Neutral"
  ))
```

```
## # A tibble: 1,000 × 6
##   date      channel sender      message      sentiment sentiment_lable
##   <date>    <chr>  <chr>      <chr>      <dbl> <chr>
## 1 2023-08-11 Twitter dave@example Fun weekend!    0.824 Positive
## 2 2023-08-11 Email  @bob_tweets Hello everyone! 0.662 Positive
## 3 2023-08-11 Slack  @frank_chat Hello everyone! -0.143 Negative
## 4 2023-08-18 Email  @frank_chat Fun weekend!    0.380 Positive
## 5 2023-08-14 Slack  @frank_chat Need assistance  0.188 Positive
## 6 2023-08-04 Email  @erin_tweets Need assistance -0.108 Negative
## 7 2023-08-10 Twitter @frank_chat Hello everyone! -0.741 Negative
## 8 2023-08-04 Slack  alice@example Hello everyone! -0.188 Negative
## 9 2023-08-20 Email  dave@example Team meeting    0.618 Positive
## 10 2023-08-09 Slack  @erin_tweets Hello everyone! -0.933 Negative
## # i 990 more rows
```

Question-11: Message Impact

Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

Solution:

```
# Enter code here
new<-
comm_data%>%
  mutate(product_sentiment_length=sentiment*nchar(message))%>%
  arrange(desc(product_sentiment_length))
new
```

```
## # A tibble: 1,000 × 6
##   date      channel sender      message      sentiment product_sentiment_le...1
##   <date>    <chr>   <chr>      <chr>          <dbl>          <dbl>
## 1 2023-08-16 Email   @frank_chat Hello every...    0.998          15.0
## 2 2023-08-14 Slack   @erin_tweets Hello every...    0.988          14.8
## 3 2023-08-18 Email   dave@example Hello every...    0.978          14.7
## 4 2023-08-17 Email   dave@example Hello every...    0.977          14.7
## 5 2023-08-07 Slack   carol_slack  Hello every...    0.973          14.6
## 6 2023-08-06 Slack   dave@example Hello every...    0.968          14.5
## 7 2023-08-08 Slack   @frank_chat  Need assist...    0.964          14.5
## 8 2023-08-09 Email   @erin_tweets Need assist...    0.953          14.3
## 9 2023-08-17 Twitter @frank_chat  Hello every...    0.952          14.3
## 10 2023-08-12 Email   carol_slack  Need assist...    0.938          14.1
## # i 990 more rows
## # i abbreviated name: 1product_sentiment_length
```

Question-12: Daily Message Challenge

Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the “comm_data” dataframe.

Solution:

```
# Enter code here
comm_data%>%
  group_by(date)%>%
  summarise(num_char=sum(nchar(message)))%>%
  arrange(desc(num_char))%>%
  slice(1)
```

```
## # A tibble: 1 × 2
##   date      num_char
##   <date>      <int>
## 1 2023-08-10      875
```

Question-13: Untidy data

Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: Observation has different units across each attribute, hence they cannot be measured and compared equally. Secondly, there are more than one value in each variable, hence it would be difficult to manipulate the variables.
